

Cullen McDonald

I have spent 4-6 hours a day researching COVID-19 for over 4 months straight. Every single day. The tests they are using are fundamentally flawed and even the inventor of the tests has proclaimed emphatically the RT-PCR test should not be used to test for SARS-CoV-2. The CDC has mandated that all hospitals combine deaths FROM COVID-19 with deaths WITH COVID-19.

- 35% of the people infected are completely asymptomatic. 80% like myself have mild symptoms and recover within a couple weeks. https://sarahwestall.com/swiss-policy-research-facts-about-covid-19/?utm_source=mailpoet&utm_medium=email&utm_campaign=6-20-20+Newsletter

- In the 2018/19 flu season in our country, 8,676 people died from the flu. INCLUDING children.

- THIS season however, 8,174 people died in 2019/20 with and or of COVID in Canada.

- 6,620 or about 80% of those deaths were in LTC Facilities! Consisting of people primarily who are over the average life expectancy of Canadians (82). Sad but true. Many of which were found with such poor hygienic practices, our MILITARY had to take full control over the homes. Hygienic practices so poor that the same gloves were used for multiple patients, beds had no linen due to no laundry being done, these same employees traveled from one nursing home or group home to another. (I have personally read the 15 page Military report, it's horrific)

- That leaves 1,553 total in Canada who died of COVID-19. Many of THESE numbers came from institutions such as mental health centers, prisons, and jails. We actually have no comparative studies from our government publicly. AKA: No transparency.

- Not one of the deaths have had autopsies. Did they die of COVID-19? Did they die of other diseases and just happened to HAVE COVID-19? Nobody actually is telling us. But what we do know is that report after report of people entering the hospital for things like heart attack was marked down as COVID-19 on their charts. So did 1,553 people actually die of COVID-19?

- ZERO of these deaths were children under the age of 19. ZERO! Except for the one they just claimed, a child that died WITH COVID-19... not from it. Are you starting to see the trend?>

-This leaves the general public with a 0.004% chance of dying of COVID-19 so far this year.

What have we done? Destroyed our small businesses, put our children who are 0% risk in a state of mental and physical distress without schooling or critical social interaction at the most important stages of development. We have spent OVER 1 Trillion dollars this year, a quarter trillion in just 27 days and as I type this we are spending 1 MILLION dollars a minute. Odious debt that will cripple our lives for decades to come. Rises in unemployment, government dependence, mental health, depression, suicide and addiction rates will all sky rocket... All for a flu.

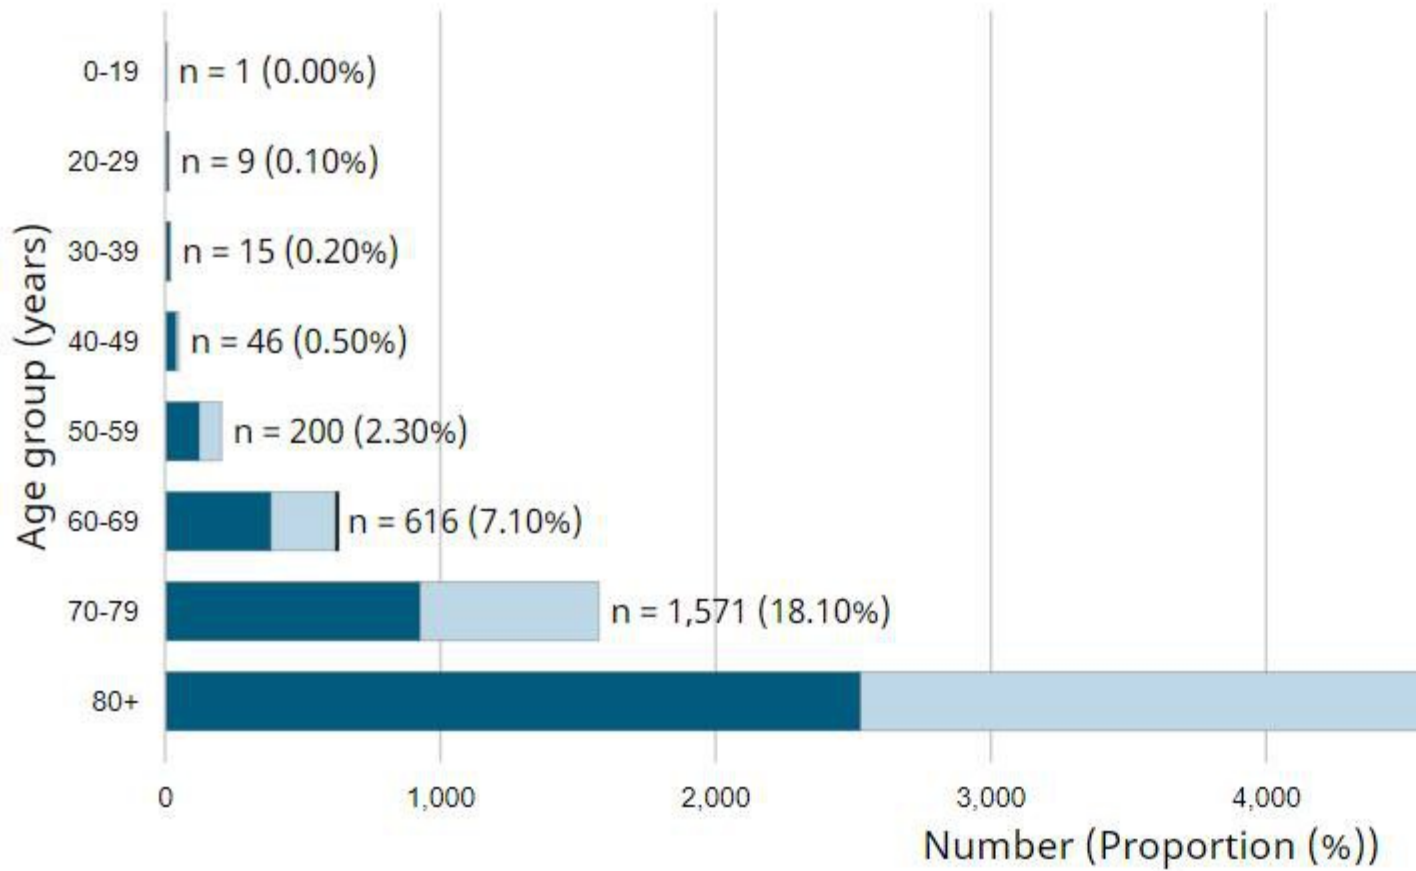

- 0.004%. Do you know what that even means? If not, you might want to look at your chances of dying for every other illness in Canada.

And interestingly enough we have had the lowest number of flu reported this year than ANY OTHER YEAR FOR THE PAST NINE YEARS!!! Where did Influenza A and B go all of a sudden

Peter Evans @peteevans66 · 1d

@TOPublicHealth I'd like to understand why you are instructing the media to record any death as a COVID death even if the death was caused by unrelated conditions/reasons according to doctors.

Toronto Public Health @TOPu · 21h

Individuals who have died with COVID-19, but not as a result of COVID-19 are included in the case counts for COVID-19 deaths in Toronto.

Peter Evans @peteevans66 · 17h

Does this not serve to mislead the public regarding how deadly (or not) COVID is? If I had cancer but died in a car accident did I die of cancer?

Figure 4. Confirmed deaths among COVID-19 cases by date of death: Ontario, March 1, 2020 to July 5, 2020
