

WARNING! DIGITAL ID

Are you willing to pay the Cost of "Convenience"?

WARNING! DIGITAL ID

Are you willing to pay the Cost of "Convenience"?

Digital ID is promoted as voluntary, inclusive, convenient, and secure, but beneath the marketing is an Artificial Intelligence (AI) driven system designed for **surveillance, centralization, and control modelled after China's Social Credit System**. History predicts that participation presented as optional **eventually becomes mandatory** in order to function in modern society.

Digital ID is the cornerstone of the global "sustainable development" initiatives of **Agenda 2030**. These initiatives are executed in incremental and subtle phases resulting in **self-inflicted servitude**. The Canadian federal government has already signed multiple agreements with international governments and unelected NGOs, such as the UN, to digitize our lives at an **estimated cost to taxpayers of \$6.6 billion**.

Convenience must never be at the expense of freedom of choice. When access to your lifestyle—money, transportation, healthcare, employment, communication, etc—depends on a Digital ID, privacy, choice, and autonomy are surrendered. Once surrendered, they are rarely returned. **Access that is granted can be restricted, suspended, or revoked.**

Contact your elected officials to insist they reject Digital ID implementation.

STAY INFORMED. DEMAND CHOICE. TAKE ACTION.

THE REALITY	Digital-only systems mandate the use of technology and energy dependence on the grid, which you do not have control over.	Criminals adapt. No digital system is immune to hacking. Centralized digital data increases the scale of risk and harm .	All your information will be in one place. Universal access to ID via digitization is a trojan horse argument since non-digital options exist. Centralised identity storage creates a single point of surveillance, tracking, and vulnerability, removing personal autonomy, privacy, and offline alternatives .	It's convenient not to carry cards or cash. A cashless society means AI monitors, analyzes, and records every transaction —from groceries and garage sales to donations and personal gifts.	Everyone will be able to have an ID. Digital ID will not be accessible to those without essential technology, or to those who are off the grid or deemed non-compliant (ie low Social Credit Score).	You will have easy access to benefits and services. History tells us that the definition of "illegal" or "unacceptable" behaviour can change . Access to digital services can be withheld based on your compliance, behaviour, or "social credit score" .
THE MARKETING	You will have control over your Digital ID.	You will be safe from identity theft and criminal activity.	Universal access to ID via digitization is a trojan horse argument since non-digital options exist.
